Assignment – NLP

Dataset

Use the attached script named "wikipedia.py" to scrape lines from any Wikipedia page. You will be using this content in the subsequent steps

You will need install the following library for the script to work. Use the command

"pip install wikipedia-api" and then execute the attached script

Task

Using the dataset that you have extracted through the Wikipedia.py script. Build an LSTM based Neural Network that could generate content given any 2 input words.

Hint: Refer to the previous sessions – LSTM Language Generation example for inspiration
